

ABSTRACT OF THE INVENTION

[0052] There is provided a clothing for measuring and displaying a temperature of a baby's body and/or the temperature inside the clothing. The clothing first features a clothing body sized and configured to accommodate the baby's body therewithin. The clothing body has inner and outer clothing surfaces. The clothing further features a body temperature device which is engaged to the clothing body and has a temperature measuring member and a temperature displaying member. The temperature measuring member is disposed between the baby's body and the inner clothing surface for measuring the temperature of the baby's body. The temperature displaying member is in communication with the temperature measuring member for receiving the temperature measurement of the baby's body therefrom. The temperature displaying member has a temperature displaying surface which is disposed outside the baby's body and upon the outer clothing surface for displaying a visual indicia representative of the temperature of the baby's body.
